ENVRIplus Data for Science Theme: software and solutions for the environmental research infrastructures

What is ENVRIplus?

ENVRIplus is a Horizon 2020 project bringing together Environmental and Earth System Research Infrastructures, projects and networks (fig.1) together with technical specialist partners to create a more coherent, interdisciplinary and interoperable cluster of Environmental Research Infrastructures across Europe.

ENVRIplus & RDA

ENVRIplus consists of 18 Research and Development work packages further organized in 6 “Themes” (fig.2). Most relevant to RDA is Theme 2 “Data for science”, which will establish an ICT approach for handling the lifecycle of scientific data based on the latest technologies offered by e-Infrastructure providers (such as EUDAT and EGI). This approach will inspire interoperable solutions that can benefit research infrastructures and break the barriers between them.

Who are the partners?

- Theme leader Dr. Zhiming Zhao, University of Amsterdam z.zhao@uva.nl
